

## Information sheet direct sowing / open-field sowing

Do you want to give nature a hand? The following types of seed are recommended for direkt sowing / open fiel sowing:

### In spring (February – May):

Tree species (botanical)	Tree species (English)	Quantity / hectare	Advices
Abies alba	Silver fir	3,00 kg	
Acer pseudoplatanus	Sycamore	25,0 kg	only possible stratified
Fagus sylvatica	European beech	60,0 kg	only possible stratified
Picea abies	European spruce	0,50 kg	
Pinus nigra Pinus sylvestris	Austrian pine Scots pine	0,50 kg	
Pseudotsuga menziesii	Douglas fir	0,50 kg	

### In autumn (end of October / November):

Tree species (botanical)	Tree species (English)	Quantity / hectare	Advices
Acer pseudoplatanus	Sycamore	25,0 kg	stratified also possible in spring
Betula pendula	Silver birch	0,25 kg	ideal as snow seed or just before rain is coming
Fagus sylvatica	European beech	60,0 kg	stratified also possible in spring
Quercus petraea Quercus robur Quercus rubra	Sessile oak Common oak Red oak	400 kg	

### Tips / advices:

- ideal for sowing before weeds or grass are growing
- spread the seeds over a wide area – contact with the ground is important
- it is best to sow before snow or rain
- beware of high game bite!
- too many tree species should not be mixed
